

## Collision coverage

### Distribution of collision claims by claim size, 2020 calendar year

Collision coverage insures against vehicle damage to an at-fault driver's vehicle sustained in a crash with an object or other vehicle; this coverage is common to all 50 states. The information in this fact sheet is based on collision coverage results for 1981–2021 model year vehicles insured under private passenger automobile policies in calendar year 2020. The claim amounts do not include deductibles paid by policyholders, which range from \$0 to more than \$1,000 (typically \$251–\$500).

Most collision claims are for relatively small amounts of money (**Figure 1**). Nearly 50 percent of collision claims for automobiles cost less than \$3,000. The largest number of auto claims occur in the \$1,000–1,999 range, with 17 percent. Just 2 percent cost \$25,000 or more.

**Figure 1: Distribution of claims by claim size**

**Figure 2** shows the cumulative distribution of claims by dollar amount. The first two ranges (< \$2,000) constitute just 31 percent of claims. By the \$2,000–2,999 range, autos have accumulated 45 percent of their claims, nearly 75 percent by the \$6,000–6,999 range, and 90 percent of their claims at the \$12,000–12,999 range.
